## Tutorial $n^{0} 2$

## Exercise 1. Cholesterol

The following tables sum up the cholesterol rate and the age for women for two samples, one drawn in the North of France, the other drawn in the South of France.

North of France

| Age | 46 | 52 | 39 | 65 | 54 | 33 | 49 | 76 | 71 | 41 | 58 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Choles. | 181 | 228 | 182 | 249 | 259 | 201 | 121 | 339 | 224 | 112 | 189 |

South of France

| Age | 18 | 44 | 33 | 78 | 51 | 43 | 44 | 58 | 63 | 56 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Choles. | 137 | 173 | 177 | 241 | 225 | 223 | 190 | 257 | 337 | 197 |
| Age | 19 | 42 | 30 | 47 | 58 | 70 | 67 | 31 | 21 |  |
| Choles. | 137 | 173 | 177 | 241 | 225 | 223 | 190 | 257 | 337 |  |

1. Is there an association between the two variables age and cholesterol?
2. Can you use linear regression in order to depict the association between age and cholesterol? Comment your results.

## Exercise 2. Duration of activity

The duration of activities of three different chemicals are to be compared. We randomly choose a sample of every kind of chemicals and write down the duration of activity. The results are summed up in the following table :

| Chemical | A | B | C |
| :---: | :---: | :---: | :---: |
|  |  |  |  |
| Duration | 73 | 84 | 82 |
| of | 67 | 80 | 79 |
| activity | 62 | 77 | 71 |
|  | 70 |  |  |
|  |  |  |  |

1. Describe the dataset using summary statistics. Plot the duration of activity using histograms and boxplots.
2. What do you think of these results?

## Exercise 3. Coleoptera

We compare three species of "altises Haltica" (small coleopteras) :

- Haltica Oleracea,
- Haltica Carduorum
- Haltica Ficta.

The issue is to know whether the mean length of the elytres are equal or not.
The length, in $\mu m$, of the elytres of eight randomly chosen "altises Haltica" were measures for any of the three varities of "alrises". The results were summed up in the following table.

|  | Haltica Oleracea | Haltica Carduorum | Haltica Ficta |
| :---: | :---: | :---: | :---: |
|  |  |  |  |
| 1 | 22 | 35 | 43 |
| 2 | 25 | 46 | 59 |
| 3 | 33 | 48 | 67 |
| 4 | 47 | 55 | 69 |
| 5 | 53 | 56 | 70 |
| 6 | 57 | 78 | 71 |
| 7 | 58 | 82 | 75 |
| 8 | 64 | 87 | 77 |

Are the lengths equal for a test level of $5 \%$ ? If the lenghts are not equal, compare these.
